

Wood's Laxative Mineral Water.

Well Recently Bored 137 Feet Deep, Situated
One Mile West of Hopkinsville.

ANALYSIS OF WATER.

By Kentucky Agricultural Experiment Station, Lexington, Ky.:
One gallon contains 323.6 grains of solid matter (5.53 grams per liter) composed mainly of sodium chloride (common salt), sodium sulphate (Glauber's salt), with small amount of calcium sulphate, calcium carbonate, magnesium carbonate and sodium sulphide. Hydrogen sulphide free and combined is present to the extent of 5.0 grains per gallon. There are traces of sodium iodide and sodium bromide, iron, silica, potassium and lithium salts. There is a salt-sulphur water and would doubtless have a laxative effect in addition to the other properties of a sulphur water.

S. D. AVERITT, Chemist.

Growing Children and Study.
As soon as a child begins to grow rapidly all intellectual exertion should be checked. Such is the theory which Dr. C. Mercier, an English authority on children, expresses in an article in the London Lancet. Especially when there is any family tendency to nervous or mental disorder, rapidly growing children should be withdrawn from school altogether until the period of rapid growth is over.
